

### Self-cleaning turbidity water quality sensor from Hydrolab

Hydrolab sondes use a self-cleaning turbidity sensor that measures from 0 to 3000 NTU and includes a user-programmable cleaning system to remove fouling or debris that could potentially affect readings.

| Turbidity Sensor |   |
|------------------|---|
| Range            | 0 ... 3000 NTU  |
| Accuracy         | ± 1% up to 100 NTU, ± 3% from 100 ... 400 NTU, ± 5% from 400 ... 3000 NTU |
| Resolution       | 0.1 NTU from 0 ... 400 NTU; 1 NTU for >400 NTU                            |
